PALAWAN GOLF COURSE AND ECO PARK RESORTS

*Premier International Std 18-Hole Golf Course &
Luxury HALAL Beach Resorts Concept in Southeast Asia*

PROJECT LOCATION	Sitio Bubusawin, Barangay Apurawan, Municipality of Aborlan (West Coast), Palawan, Philippines
TARGET MARKET	International and Philippine tourists, ASEAN golfers, GCC travelers, wellness guests, families, and Muslim-friendly tourism markets
PROJECT POSITIONING	Integrated international-standard golf course, nature-based Eco Park, and luxury HALAL beachfront resort

- Palawan has been awarded multiple times as the World's Best Island Palawan has been voted the "Best Island in the World" multiple times by *Travel + Leisure* magazine's World's Best Awards. and is globally recognized for its pristine beaches, eco-luxury tourism appeal, biodiversity, and premium hospitality potential.
- The project site is located in a typhoon-free and cove-protected coastal area, ideal for year-round golf operations, sustainable tourism, luxury resort development, and international travel.

Executive Summary

The Palawan Golf Course and Eco Park Resort is envisioned as a landmark integrated tourism, recreation, wellness, and conservation destination in Sitio Bubusawin, Barangay Apurawan, Municipality of Aborlan, Palawan. The project combines a planned international-standard 18-hole golf course, a nature-based Eco Park, and a luxury HALAL beachfront resort within one coordinated master plan.

By uniting golf tourism, eco-tourism, wellness, family recreation, and Muslim-friendly hospitality, the project aims to broaden Palawan's premium tourism offerings and attract visitors from the Philippines, ASEAN markets, Gulf Cooperation Council countries, and other international destinations. The Eco Park component strengthens the concept by providing conservation areas, nature interpretation, outdoor recreation, and environmental education alongside the resort and golf facilities.

Vision & Development Concept

The project vision is to establish a globally competitive coastal destination where luxury tourism and responsible environmental stewardship operate together. The master plan will balance guest facilities with protected landscapes, open spaces, native vegetation, low-impact mobility, and carefully managed recreation zones.

The destination is intended to offer exclusivity, cultural inclusivity, wellness, family-friendly leisure, environmental learning, and premium lifestyle experiences while creating long-term value for the host community and conserving the natural character of the site.

International-Standard 18-Hole Golf Course

The golf course is planned as a principal tourism anchor and a potential first international-standard 18-hole course in Palawan. It may be designed to host regional tournaments, private corporate events, ASEAN golf competitions, training programs, and luxury golf travel experiences. Supporting facilities may include a clubhouse, golf academy, driving range, practice greens, golf-view villas, locker and wellness lounges, pro shop, and VIP hospitality areas.

Course planning should incorporate the natural terrain, preserve significant landscape features, use water-efficient turf and irrigation systems, and establish vegetated buffers between play areas and sensitive ecological zones.

Eco Park & Nature-Based Attractions

The Eco Park will serve as the project's conservation, recreation, and environmental education component. It will provide non-golf attractions for families, students, wellness travelers, and nature-oriented visitors, creating a more inclusive destination and extending guest length of stay.

- Native botanical gardens, demonstration landscapes, and a nursery for indigenous and climate-resilient plant species.
- Shaded nature trails, elevated boardwalks where appropriate, scenic viewing decks, birdwatching areas, and guided interpretation routes.
- An Eco Discovery and Interpretation Center featuring Palawan's terrestrial, coastal, and marine ecosystems, local culture, and responsible tourism practices.
- Low-impact family recreation areas, picnic lawns, children's nature play zones, wellness gardens, and outdoor learning spaces.
- Habitat restoration, coastal vegetation enhancement, and mangrove rehabilitation only where supported by site ecology studies and government approvals.
- Guided eco-tours, conservation workshops, tree-growing activities, citizen-science programs, and partnerships with schools and local organizations.

Environmental Sustainability & Conservation Strategy

Environmental planning should begin with a biodiversity baseline study, land-use suitability analysis, drainage assessment, and identification of sensitive habitats. The master plan should establish conservation zones and development buffers before finalizing the golf, resort, residential, and visitor areas.

- Prioritize native landscaping, tree retention, habitat corridors, and minimized building footprints.
- Use rainwater harvesting, water-efficient fixtures, treated wastewater for suitable irrigation uses, and stormwater features that reduce runoff and erosion.

- Adopt energy-efficient buildings, solar-ready infrastructure, electric golf carts and guest shuttles, and shaded pedestrian connections.
- Implement waste segregation, composting of landscape and food waste, reduced single-use plastics, and responsible procurement from local suppliers.
- Create an environmental monitoring program covering water quality, vegetation, wildlife, visitor capacity, and restoration performance.

HALAL Luxury Beach Resort Concept

The resort is strategically positioned as a luxury HALAL and Muslim-friendly destination for travelers from Malaysia, Indonesia, Brunei, Singapore, GCC countries, and the wider international market. The hospitality concept may include halal-certified dining, clearly designated prayer facilities, family-oriented accommodations, privacy-sensitive leisure options, culturally respectful services, and premium beachfront experiences.

The resort may also provide inclusive facilities for all guests while maintaining high standards of food safety, service quality, privacy, wellness, and cultural sensitivity.

Target Market & Tourism Potential

Primary markets include international and Philippine leisure travelers, ASEAN and regional golf tourists, luxury and wellness travelers, families, nature enthusiasts, corporate and incentive groups, and Muslim-friendly tourism markets. The integrated concept reduces dependence on a single visitor segment by combining golf, resort stays, eco-tourism, events, education, wellness, and family recreation.

Strategic Location Advantage

Palawan's international tourism reputation and exceptional natural setting provide a strong foundation for an integrated golf, Eco Park, and resort destination. The proposed site in Barangay Apurawan, Aborlan offers a west-coast coastal environment with the potential for scenic golf views, beachfront hospitality, nature trails, open-space conservation, and year-round leisure activities. Final planning should remain subject to access, geotechnical, hydrological, environmental, and disaster-risk assessments.

Luxury Resort, Wellness & Recreation Facilities

The integrated development may include luxury beachfront villas, golf-view accommodations, private residences, family suites, infinity pools, spa and wellness facilities, fitness and recovery areas, conference and event venues, recreation lawns, children's facilities, and selected marina or water-based leisure concepts where technically and environmentally feasible.

The Eco Park can complement these facilities through wellness trails, meditation gardens, outdoor fitness routes, nature-viewing spaces, farm-to-table demonstration gardens, and curated cultural or environmental programs.

Economic, Community & Environmental Impact

The project has the potential to support tourism growth, local employment, hospitality investment, infrastructure improvement, and new enterprise opportunities in Aborlan and surrounding communities. Employment may include resort and golf operations, landscaping, environmental management, tour guiding, transport, food production, maintenance, security, retail, and cultural programming.

Local sourcing, skills training, community partnerships, and environmental education can help distribute benefits beyond the resort boundary. A dedicated conservation program may also create long-term funding for habitat management, native planting, ecological monitoring, and visitor education.

Investment Opportunity & Revenue Streams

The Palawan Golf Course and Eco Park Resort presents a diversified tourism and real-estate investment opportunity within one of Southeast Asia's most recognized island destinations. Potential revenue streams may include resort operations, golf fees and memberships, tournaments and corporate events, villa and residence development, wellness services, food and beverage, conferences, guided eco-tours, Eco Park admissions, educational programs, retail, local-product partnerships, and destination events.

A phased development strategy may begin with enabling infrastructure, site conservation and Eco Park features, followed by resort accommodations, golf facilities, and complementary residential or hospitality components based on feasibility and market demand.

Key Competitive Advantages

Competitive Advantage	Strategic Value
Integrated Golf-Eco Park-Resort Concept	Creates a distinctive multi-attraction destination and broadens the visitor base beyond golfers.
International-Standard Golf Course	Supports golf tourism, memberships, tournaments, training, and premium events.
Nature-Based Eco Park	Adds conservation, family recreation, environmental education, guided tours, and year-round non-golf activities.
HALAL Luxury Hospitality	Appeals to Muslim travelers while remaining welcoming and accessible to the wider international market.
Palawan Destination Brand	Benefits from Palawan's global recognition for nature, beaches, biodiversity, and premium tourism.
Diversified Revenue Model	Combines accommodation, golf, events, residences, wellness, Eco Park activities, and food and beverage.
Sustainability-Led Planning	Supports long-term destination resilience through conservation zoning, efficient resource use, and environmental monitoring.
Community Partnership Potential	Creates local employment, supplier opportunities, training, guiding, cultural programs, and conservation participation.

Conclusion

The Palawan Golf Course and Eco Park Resort is positioned as an integrated tourism concept built around three core pillars: international-standard golf, nature-based conservation and recreation, and luxury HALAL beachfront hospitality. The addition of a fully developed Eco Park gives the project a stronger identity, creates attractions for a wider range of visitors, and connects premium tourism with environmental education and responsible land stewardship.

With careful feasibility planning, environmental safeguards, phased investment, and meaningful community participation, the project has the potential to become a distinctive golf, eco-tourism, wellness, and Muslim-friendly destination in Palawan and the wider Southeast Asian market.

Development Note: All proposed facilities, ecological interventions, revenue projections, and site claims are conceptual and should be validated through detailed feasibility studies, environmental impact assessment, carrying-capacity analysis, engineering investigations, market studies, and applicable national and local government approvals.

Welcome to Palawan!

"Top 1 Best Island in the World"

- Travel + Leisure Magazine 2013, 2016-2017

- Condé Nast 2020 Readers Choice best islands in Asia

Palawan Island, located in the Philippines, has taken the crown 3 times before in 2013, 2016, and 2017 in Travel + Leisure Magazine, and also made Condé Nast 2020 Readers Choice best islands in Asia.

Palawan province lies in the southwest Philippines. The main island of Palawan is 40 kilometres wide and 425 kilometres long, forming the border between the South China Sea and the Sulu Sea. The capital city Puerto Princesa occupies the central part of Palawan Island and is 500 kilometres from Manila. Palawan Island and the other 1,768 islands in the region are home to 740,000 inhabitants from 81 different ethnic groups.

Palawan is a green jewel, nature's paradise, with large areas of tropical lowlands and mountainous rainforest. The rainforest covers a majestic mountain range that stretches across the entire main island. Fine white sandy beaches and steep limestone cliffs shape the charming coastal landscape of Palawan. Idyllic turquoise-coloured lagoons and countless small deserted islands guarantee holidays that are out of this world - full of romance, peace and relaxation.

Location

Palawan, like the other main islands in the Philippines, can be reached by air or water. Domestic flights serve Puerto Princesa, Busuanga and El Nido from Manila and/ or Cebu. Manila or Cebu to Puerto Princesa each takes about 50-60 minutes.

Located at Sitio Bobosawen, Barangay Apurawan, Municipality of Aborlan (West Coast) in the Province of Palawan, Philippines, adjacent Municipality of Puerto Princesa City, Palawan.

Just 45 minutes ride all the way concreted road from Puerto Princesa City International Airport.

< Measure

Move the map and add points to measure distances and area

Perimeter

5,689.79 m

Area

1,664,426.97 m²

Longpoint Beach

Ideal for fun and relaxation, Longpoint Beach is located in the Municipality of Aborlan, Palawan. **More than a kilometer of pristine White Sand Beach** with waters that are pure, serene and crystal-clear that is a perfect alternative to the more crowded and commercialized beach destinations in the country.

Beautiful blue water mixes with emerald green, jungle-filled forest which seems to rise up from the ocean together with its neighboring islands creates the Palawan province. It's awe-inspiring natural wonders can be credited to its geographical location.

Cove Type & Typhoon Free

Its geographical location provides an advantage of being a calamity-free zone. Located in the West Philippine Sea, the Palawan Province in general is free from typhoon as the Low Pressure Area (local term "Amihan") emanates from the North Philippine Sea. Longpoint Beach is also widely protected by a "Cove", liberating the site from sea disturbances and heavy waves derived from the east-west monsoon (local term "Habagat"). Furthermore, it is far away from the identified Fault-Line making it earthquake free.

Flat Terrain

Beach bums are sure to love it here! Surrounded with bountiful trees in a flat terrain, you're sure to find enough shade if you plan on strolling or take photos. It's surrounded with forests and abundance of coconut trees, making it a perfect postcard-worthy shot.
